Image Alignment

From mPDF version 4.2 onwards, in-line images can be individually aligned (vertically). Most of the values for "vertical-align" are supported: top, bottom, middle, baseline, text-top, and text-bottom. The default value for vertical alignment has been changed to baseline, and the default padding to 0, consistent with most browsers.

Mixed alignment

Image Border and padding

From mPDF v4.2, Image padding is supported as well as border and margin.

Rotated Images
